CRD Customisation

Make CRD Yours — All Through the Web Browser

Masoud Hamad (SUZA) | **Msilikale Msilanga (UTU)**

Day 2 | 30 Minutes (Lecture) | crd.resilienceacademy.ac.tz

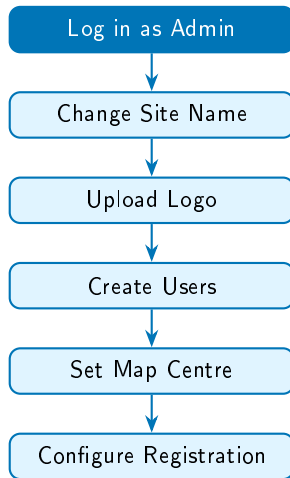

Session Overview: Make CRD Yours

Right now, your CRD looks like a blank template. In this session, you will learn how to personalise it for your institution.

Everything we cover today is done through the web browser — no code, no terminal, no configuration files.

What we will cover:

- 1 Admin panel tour — what each section does
- 2 Changing the site name, domain, and logo
- 3 Managing users: accounts, roles, permissions
- 4 Map settings: default centre point and zoom
- 5 Registration settings: open vs. invite-only

Admin Panel Tour: What Each Section Does

How to get there:

- 1 Log in → Click your username (top-right)
- 2 Select “**Admin**” from the dropdown menu

Think of the admin panel like the **settings app on your phone** — it has sections for different things:

GeoNode Settings

- **Base:** Site name, keywords, default language
- **Layers:** Manage uploaded datasets

Authentication & Users

- **Users:** Create, edit, deactivate accounts
- **Groups:** Organise users into teams
- **Group Profiles:** Set group permissions and descriptions

Site Administration

- **Sites:** Set domain name and display name
- **People:** User profiles and contact info
- **Announcements:** Post messages to all users

Changing Site Name, Domain, and Logo

Step 1: Change the Site Name

- 1 In admin panel, go to **Sites** → **Sites**
- 2 Click on “**example.com**”
- 3 Change **Domain name** to your URL
e.g. localhost or crd.tanga.go.tz
- 4 Change **Display name** to your institution's name
e.g. “Tanga City Council — CRD”
- 5 Click **Save**

Step 2: Change the Logo

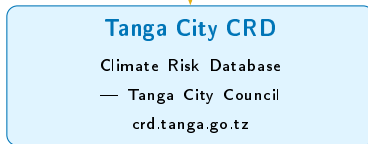

- 1 Go to **GeoNode** → **Base** → **Configuration**

Before and After:

BEFORE

AFTER

Tip

Prepare your logo file **before** the practical

User Management: Accounts, Roles, Permissions

Creating a New User Account:

- 1 Admin panel → **Authentication** → **Users**
- 2 Click **"Add User"**
- 3 Fill in: username, password, email
- 4 Set **Staff status** if they need admin panel access
- 5 Click **Save**

The Four Permission Levels:

Viewer: Can browse and download public data

Editor: Can upload and edit own data

Groups — Organising Users by Team:

Groups let you set permissions for **entire teams** at once.

Example for Tanga City Council:

- Group: **"Planning Department"**
 - Can view and edit planning datasets
 - Cannot touch health or environment data
- Group: **"Environment Unit"**
 - Can view and edit environmental datasets
 - Can view (but not edit) planning data

Creating a Group

Map Settings: Default Centre Point and Zoom

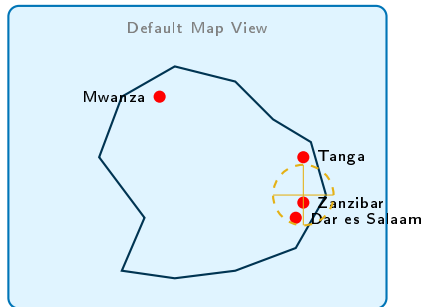

When users open the map viewer, CRD shows a **default location**. You should set this to your area of interest.

Coordinates for our training cities:

City	Latitude	Longitude
Tanga	-5.07	39.10
Mwanza	-2.50	32.90
Dar es Salaam	-6.79	39.28
Zanzibar	-6.16	39.19

How to set the default map centre:

- 1 Admin panel → **GeoNode** → **Base**
- 2 Find “**Map Settings**” or “**Default Map Center**”

Practical Tip

During the practical, **Tanga group** will set centre to -5.07, 39.10 and **Mwanza group** will set centre to -2.50, 32.90. This way each team's CRD screen shows their own city.

Registration Settings and Session Summary

Who can create an account on your CRD?

Option 1: Open Registration

- Anyone can create an account
- Good for **public-facing** CRD instances
- New users start as **Viewers** by default
- Admin can promote them later

Setting: Admin → Configuration →
Registration: Open

Option 2: Invite-Only Registration

- Only admins can create accounts

Session Summary:

- ✓ The admin panel is your **control centre** — accessed through the web browser
- ✓ Change **site name and domain** under Sites
- ✓ Upload your **institution's logo** under Configuration
- ✓ Create **user accounts** and organise them into **groups** with appropriate permissions
- ✓ Set the **default map centre** to your city's coordinates
- ✓ Choose between **open and invite-only**
